

ABSTRACT

A CMOS inverter having a heterostructure including a Si substrate, a relaxed $\text{Si}_{1-x}\text{Ge}_x$ layer on the Si substrate, and a strained surface layer on said relaxed $\text{Si}_{1-x}\text{Ge}_x$ layer; and a pMOSFET and an nMOSFET, wherein the channel of said pMOSFET and the channel of the
5 nMOSFET are formed in the strained surface layer. Another embodiment provides an integrated circuit having a heterostructure including a Si substrate, a relaxed $\text{Si}_{1-x}\text{Ge}_x$ layer on the Si substrate, and a strained layer on the relaxed $\text{Si}_{1-x}\text{Ge}_x$ layer; and a p transistor and an n transistor formed in the heterostructure, wherein the strained layer comprises the channel of the n transistor and the p transistor, and the n transistor and the p transistor are interconnected
10 in a CMOS circuit.
